

# P2 GRIPS

## Science Meets Feel - What's different about P2 putter grips?

P2 grips feature a shaft position which runs off-centre and along the underside of the grip. The shaft position runs 1.5 – 3.0 degrees off-centre in each grip which increases the ulnar deviation of both wrists during the stroke.

The actual lie angle of the putter is not affected, the change in wrist position will make the putter feel slightly more upright once in the correct playing position with the putter head flat on the green.

### How does it work?

The off-centre design increases ulnar deviation, limits mobility to the hands & wrists and promotes shaft & forearm symmetry, leading to greater face control.
